Pedestal Catalogue

For installations with particularly irregular surfaces, Impertek has expanded its renowned Martinetto range with the Balance Supports series: 18 supports with a range between 25 and 392 mm, built-in self-levelling Balance head, which automatically adjusts the slope of the installation surface up to 5%. Available with two types of tabs (10mm high and 2 or 4mm thick), they are ideal for stone and ceramic floors, but also make decking easier to install.

With Balance Supports, the head automatically adjusts to the slope of the installation surface, creating a perfectly level upper flooring without the need for any work for the installer. Moreover, with particularly irregular surfaces, CP slope correctors can be applied under the supports to increase the correction percentage up to 10%.

Balance Supports are available in the MiniBalance version (with a range between 25 and 50 mm), in 12 Balance Supports (between 47 and 377 mm, each with a 35 mm range) and in the Tutto Filetto Balance Supports version, 3 products that cover heights from 97 to 392 mm on their own.
